DETAILED ACTION

Election/Restrictions

Claims 3-55 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on February 9, 2007. Applicant's election with traverse of Species 1, claims 1 and 2 in the reply filed on February 9, 2007 is acknowledged. The traversal is on the grounds that separate searches would not be required nor place an undue burden on the Patent Office. This is not found persuasive because the species election requirement is based on the patently unique structures, not the search burden. A laser structure for cutting a chord is unique from a blade structure for cutting a chord in that when positively cited in the claim, one would not anticipate the other.

The requirement is still deemed proper and is therefore made FINAL.

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the shading of the drawings precludes satisfactory reproduction. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 3739

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The meaning of "the diameter of the cutting edge" is not clear. It could be interpreted as the diameter of the actual edge or the shape of the blade itself. The figures fail to show this relationship to a chord.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 5,507,795 to Chiang et al. Chiang et al. disclose a catheter with a catheter body (Fig. 2, # 22)

FIG. 2

and a cutting blade (Fig. 2, # 48). The catheter includes a cutter housing aperture (opening) for the cutting blade (Col. 7, lines 45-51). The

cutting blade is clearly capable of cutting a chord attaching an atrioventricular leaflet. The item actually cut is intended use.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent Application Publication US 2004/0034380 teaches a device for treating a heart valve with a cutting means capable of severing a chord.
